

Cubey 3 Solution

Homemade Puzzles

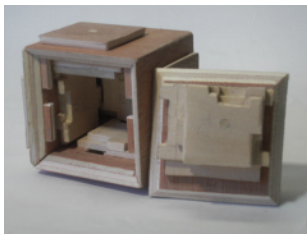

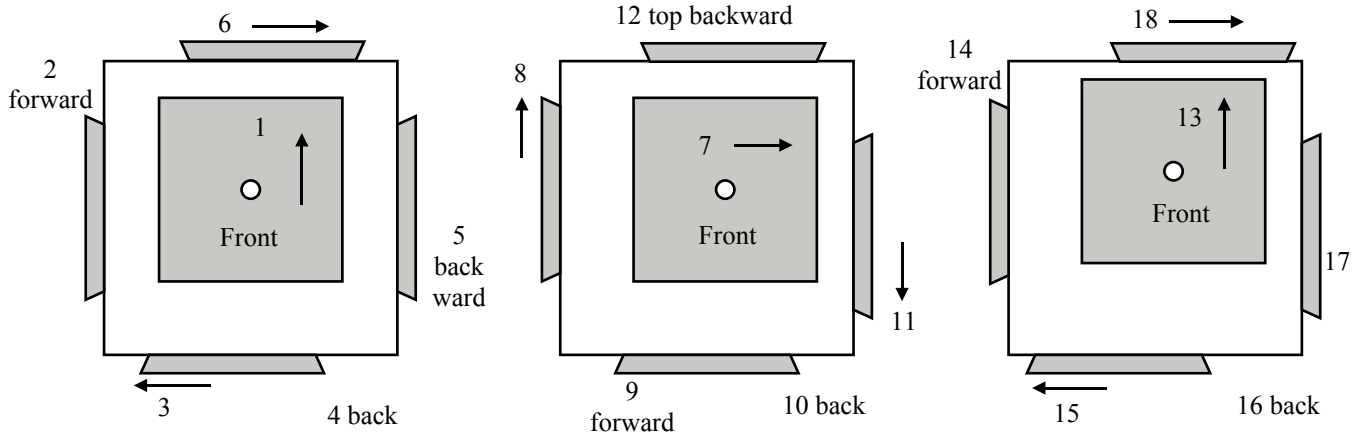

There is only one panel that will move at the start. Find this panel, and hold the box so that this panel is facing you, and will move upward. Now follow these steps:

1. front up
2. left forward
3. bottom to the left
4. back downwards
5. right backwards
6. top to the right

7. front to the right
8. left upwards
9. bottom forwards
10. back to the left
11. right downwards
12. top backwards

13. front upwards
14. left forwards
15. bottom to the left
16. back downwards
17. right backwards
18. top to the right and off.

WARNING!

If you start turning the box over and over while trying to open it, you could lose track of where you are! Once you start, there are two panels that can move—the one you've just moved, and the next one to be moved. In turning the box around, you might think that the panel to be moved, is in fact, the one you've just done! In that case, you'll be going back to the start!

Enjoy your puzzle!

Why would you want the solution to a puzzle that you haven't got? The Solution might help you decide whether to make that puzzle.
