

Maths ideas this week

Our main maths work this week is about **measurement** and **calculations**.

It should help you:

- ⇒ be accurate when measuring and drawing lengths (including to the nearest millimetre);
- ⇒ solve word problems, including problems involving lengths and distances;
- ⇒ calculate the area of rectangles;
- ⇒ calculate the perimeter of shapes;
- ⇒ read the time on a 24 hour clock and be able to convert time between the 24 and the 12 hour clock;
- ⇒ solve problems involving time and the calendar;
- ⇒ read coordinate and plot points on a coordinate grid;
- ⇒ find the area of irregular shapes by "counting squares".

It should also help you:

- ⇒ use different ways to present a persuasive argument.
