

MATERIALS

> CARD DORLASTAN

Very functional and extremely elastic fabric that feels like a second skin. Easy to wash and fast drying. Offers resistance against mould and odours.

> LYCRA DU PONT

Bio-Racer chose Du Pont Lycra, the extremely high-quality elastic type of textile for cycling trousers. Using Du Pont Lycra ensures optimal comfort. If you follow the instructions, you'll enjoy these cycling trousers for a very long time.

> GAMEX COMPACT

An elastic material made from polyester filament micro fibre yarn. Wind and waterproof, very permeable, light and supple, elastic and easy to maintain.

> WINDBLOCK LIGHT

Windblock is a light elastic material that regulates body heat and is weatherproof.

> AIRTEX

Keeps the body dry and has a comfortable feel during physical effort. This fibre developed by Bio-Racer has extra advantages: • a dryer feeling due to fast body

dampness drainage • increased air permeability (breathing capacity) for comfort • not very damp absorbing so the clothing doesn't get clammy • extra softness to prevent irritation • machine washable and fast-drying • odour and mould resistant.

> TRANSOTEX - THERMASTAT

Thermastat is incorporated on the inside of Transotex. It offers extra comfort because this layer is roughened. Transotex offers many advantages compared to other textiles. The body is kept extra warm because of the isolating action of the fibre, which is increased by the fibre's roughening. Perspiration dampness is transported faster so it permeates even better. The polyester surface is fast drying and very strong.

> ISOLATION

The fibre of Isolation is very isolating just like Transotex, which keeps the body extra warm. Very permeable because the perspiration dampness is transported faster. The polyester surface is fast drying and feels pleasant and soft.

> WINTER WINDBLOCK

If it's really cold, then clothing with Winter Windblock is ideal. The body is protected from the elements through a three-layer system. The inner layer consists of 100% polyester. The fleece membrane offers the necessary protection against cold and rain and is also permeable. The top layer is colour and form fast and offers isolation for cold days.

> TEMPERATURE CONTROL

This elastic fleece is perfect for chilly and even cold days. The roughened inside ensures good isolation and the dampness regulation is optimal due to the polyamide fibre.
