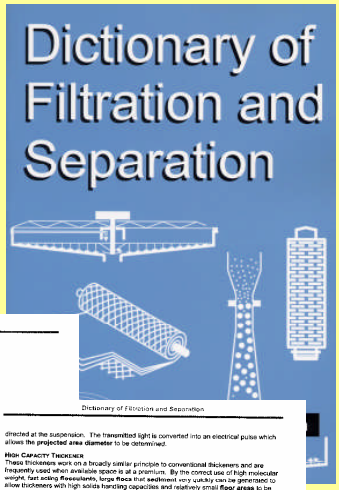
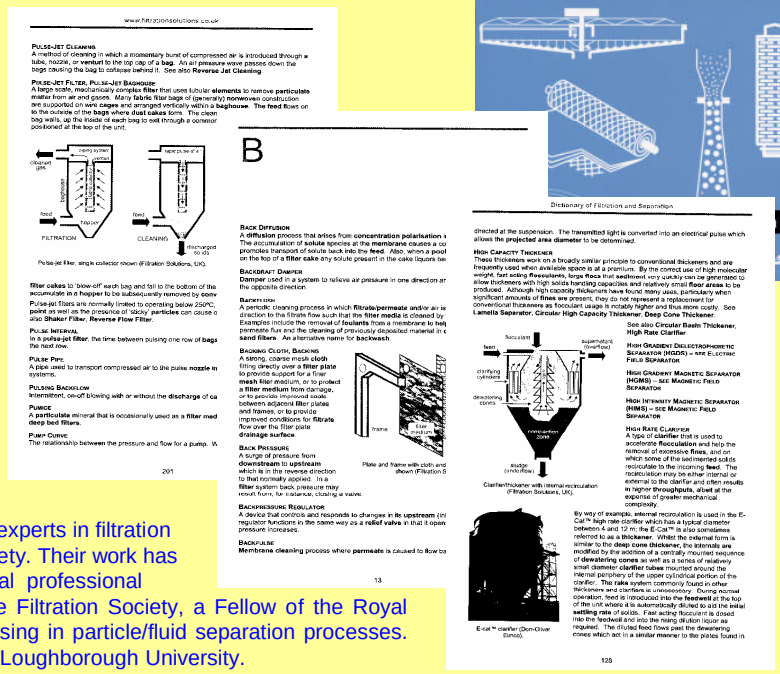
The Dictionary of Filtration and Separation

Steve Tarleton and Richard Wakeman



Over 1500 definitions of terms for solid/liquid separation, air/gas/dust separations, filter media, contamination control etc – from Abatement and Abrasion to Zone Settling and Zwitterion – plus a list of abbreviations and acronyms – are provided in this quick reference dictionary (vi + 303 pages). With clear, bold type entries it gives a direct lead into the detail and use of equipment, and defines precisely the meanings of terminology.

With this new Dictionary the authors have put together an authoritative and up to date text which is cross-referenced and illustrated by over 400 diagrams and photographs. The aim is to provide a source of reference for all practitioners of filtration and separation, and a valuable educational and training resource.



It is an indispensible book for plant engineers, technicians, operators, and all who work with filtration and separation technology as buyers, users, and suppliers of equipment. It is also of value to managers in production and service industries, to graduate students and researchers, standards and health and safety inspectors, and all who have associated interests.

About the authors - The authors are internationally recognised experts in filtration technologies who have both been Chairmen of The Filtration Society. Their work has been published widely and recognised by awards from several professional Institutions. Richard Wakeman is the Honorary Secretary of The Filtration Society, a Fellow of the Royal Academy of Engineering and an international consultant specialising in particle/fluid separation processes. Steve Tarleton is a mechanical engineer and a Senior Lecturer at Loughborough University.

‘The Dictionary of Filtration and Separation’
