PROCESS CONTROL SYSTEMS

What can we do for you

CALIBRATION

We provide an on-site calibration service tailored to your requirements. Be it M.O.D. specifications or just making sure the temperature is in the right ball park for you. If your equipment is out of your required spec, we will adjust it and let you know how far out it was. If you have a problem with your program, we can troubleshoot, correct or repair most systems and their controllers. We cover most types of thermocouple inputs.

TEMPERATURE SURVEYS

Surveys from your requirements to Aircraft Specifications. 1 point to 16 point surveys of

all ovens and heated baths (chemical dependant).

If your oven / bath is not performing, advice will be offered.

A comprehensive survey report with readings from 1 second intervals can be issued or alternatively from just one reading after a stabilised period of time has passed.

SYSTEMS DESIGNED TO YOUR SPECIFICATION

Process and control is part of running a tight business. We can set up, build and install

temperature control systems for you, or to suit your customers

requirements. Thus giving you better control & the ability to reduce energy

related costs such as heating of equipment like furnaces, chambers and heat treatment baths. Such a system can reduce the temperature or turn off when not in use, then turn back on, or climb to a desired temperature for the time period required.
